## **Simplist® Prefilled Syringe Supply Update**

To our valued customers,

We understand the ongoing concerns about the availability of essential medications. As a leading manufacturer of sterile injectable medicines in the United States, Fresenius Kabi plays a critical role in ensuring hospitals have the medicines they need to treat patients. This includes our line of Simplist® prefilled syringes.

Recently implemented initiatives such as focused production on the most-ordered prefilled syringes have uniquely positioned Fresenius Kabi to support evolving customer needs. Nine syringes in our portfolio now have extended 36-month stability dating, enabling us, and you, to hold more inventory to better respond to market shortages.

We are committed to maintaining safety stock of all products in our Simplist portfolio. **Table 1**, below, lists our entire Simplist product line, as well as a cross reference resource to the same total strength in a vial presentation, where offered. All Simplist presentations are currently in stock, and product availability across our entire line of prefilled syringes, vials and premixes is updated and posted weekly [here](#).

We are committed to ensuring supply of critical drugs and continue to work closely with the U.S. Food and Drug Administration to anticipate and preempt potential supply disruptions. We appreciate your ongoing partnership as we work to advance supply reliability.

Sincerely,

Matt Kozak  
Director, Marketing
